

# Polyflux H

DESIGNED FOR:

**CONVECTIVE** (HDF-HF)

OTHER APPLICABLE THERAPIES:

**HFHD** (High flux)

MEMBRANE:

**POLYAMIX** [PAES/PVP/PA, BPA-free]

## FOR EFFECTIVE CONVECTIVE THERAPIES

The **Polyflux H** dialyzer series deliver proven biocompatibility<sup>1</sup> with consistent performance. The **Polyflux H** dialyzers effectively support the delivery of high-volume convective therapies<sup>2</sup> while helping control the loss of essential proteins such as albumin<sup>3</sup> particularly challenging at high flows and TMPs.

## DESIGNED TO PROMOTE BIOCOMPATIBILITY<sup>1</sup>

The **Polyflux H** dialyzers deliver convective treatments (HDF or HF mode), as well regular high-flux hemodialysis.

- Since 1988, over 300 million **Polyflux** dialyzers have been used globally<sup>4</sup>
- Composed of the **Polyamix** membrane, which is BPA-free, the **Polyflux H** dialyzers may limit the risk of clotting events<sup>1</sup>
- The **Polyflux H** dialyzers are steam sterilized inside-out, designed to promote biocompatibility, avoiding the risks associated with the exposure to chemicals such as ethylene oxide and manufacturing residues<sup>5,6</sup>

## WITH HIGH CONVECTIVE VOLUMES IN MIND

The **Polyflux H** dialyzers are aimed at delivering stable and high performing convective treatments, supporting a consistent reach of high volumes of substitution fluid.

- Narrow pore size distribution is responsible for a carefully controlled albumin selectivity, combined with an effective permeability to small and conventional middle molecules<sup>1</sup>
- The 3-layer-membrane structure has been designed to optimize the combination of high diffusive and convective transport rates, while acting as a barrier to endotoxins<sup>7</sup>
- Facilitates obtention of high convective flow rate, and provides effective clearance of conventional middle molecules such as  $\beta_2$ -microglobulin ( $\beta_2m$ )<sup>8,9</sup>
